

Wei Zheng

z1596761805@gmail.com

Linked : www.linkedin.com/in/wei-zheng-215b62371 **Visa:** Available Full-time from 30th March, 2026

Professional Summary

Backend / Java Engineer with 3+ years of hands-on experience building production Java backend systems in telecom and platform environments.

Strong experience in event-driven architectures (Kafka), cross-system integration (IoT and carrier platforms), and data consistency and reconciliation.

Currently based in New Zealand, seeking **backend or Java engineer roles at junior to intermediate level** in collaborative engineering teams.

Available for full-time internship or full-time work from 30 March.

Technical Skills

Languages:

- Java 8, SQL

Backend & Platform:

- Spring Boot, Spring Security (JWT)
- RESTful API design, RBAC, state machines, scheduled jobs

Database & Persistence:

- MySQL 8, transactional design
- Financial ledgers, audit logs

Messaging & Caching:

- Kafka (event-driven architecture)
- Redis, Caffeine

DevOps & Infrastructure:

- Docker Compose, Nginx

Work Experience

China Mobile (Hangzhou) Information Technology Co., Ltd. - Java Developer Nov 2022 - Feb 2025

- Developed and maintained **Java / Spring Boot backend services** for large-scale telecom platforms.
- Built and supported **event-driven processing flows** involving async tasks, scheduled jobs, and cross-system data synchronization.
- Participated in **Kafka-based message processing**, reconciliation jobs, and state consistency handling across internal systems.
- Improved reliability and maintainability through refactoring, logging enhancements, and production issue resolution.
- Worked within a **large multi-module system (70+ modules)**, collaborating with frontend, QA, and ops teams.

Shanghai Qianjiang Network Technology Co., Ltd. - Java Developer Sep 2021 - Oct 2022

- Implemented backend business logic using **Spring Boot and MySQL**

Project Experience

China Mobile's Smart Home Ecosystem - Backend Developer

AndlinkPro — IoT Gateway & Sync Service (Telecom Platform)

- Built Kafka-based async event pipelines for device state, events, and sharing, with retries, stale-event filtering, and batch processing.
- Implemented scheduled reconciliation jobs to ensure device and share state consistency between platform DB and external IoT systems.
- Introduced config-driven sync control (feature toggles, allowlists, device-type routing) to support safe rollout and operational flexibility.
- Optimized performance using Caffeine caching (macId → deviceId), reducing cross-service lookups under high event load.
- Improved reliability and observability with structured logging, trace IDs, and health monitoring for third-party integrations.

Family Feature Analysis (Home Analysis) - Backend Developer

- Designed and implemented a hybrid pipeline: offline scheduled full-scan (ElasticJob + Kafka), real-time alarm-triggered processing (Kafka consumer, 7-day device-pool cycle with Redis), and API-triggered batch for specific devices.
- Integrated with compute platform API for multi-datacenter GPU scheduling; unified 1.0 (frame extraction + delay queue) and 2.0 (cover URL) flows; callback persistence to Elasticsearch with traceability.
- Built progress and cycle management with Redis (cycle/job/shard state); kept Kafka partition count ≥ ElasticJob shard count and mapped job shards to Kafka partitions for predictable progress tracking without cross-shard locking.
- Wrote regionalization design/docs or runbooks for multi-region deployment.

Open Platform Gateway – Gray & Cross-Region Routing - Backend Developer

- Designed a pluggable gray-routing domain: factor extraction from headers (app, province/city, device, phone), ratio and whitelist rules, config-driven targets with hot refresh, and optional Caffeine cache keyed by factors.
- Built gray-based cross-region routing with dynamic URI reconstruction (scheme, host, port, path prefix) so one route can proxy to different region backends by gray result.
- Reused the gray engine for both cross-region route selection and token validation service selection, keeping routing and auth rules consistent.

Education

Yoobee College, New Zealand - Master of Software Development - Master	Jul 2025 - Jul 2026
Quanzhou Normal University, China - Bachelor of Computer Science - bachelor's degree	Sep 2020 - Jun 2022
Liming Vocational University - Architectural Engineering Technology - Junior college	Sep 2017 - Jun 2020
